build_package   *Check and Build Package*

Description

Check and Build Package

Usage

```
build_package(path = ".", exclude = NULL, write_Rbuildignore = TRUE,
  as_cran = FALSE)
```

Arguments

path	[character](#) (with default): set package path
exclude	[character](#) (optional): names of build modules you want to exclude]
write_Rbuildignore	
	[logical](#) (optional): writes are master build-ignore
as_cran	[logical](#) (with default): enable/disable `--as-cran` check

Examples

```
print("This is only to silence the CRAN check")

## Not run:
build_package()

## End(Not run)
```

module_add_HowToCite *Add How to Cite Section*

Description

Adds a section 'How to Cite' to each manual page as long as author names and version numbers are given

Usage

```
module_add_HowToCite()
```

Function version

0.1.0

How to cite

Burow, C., Kreutzer, S. (2019). module_add_HowToCite(): Add How to Cite Section. Function version 0.1.0. In: Kreutzer, S., Burow, C. (2019). RLumBuild: RLum Universe Package BuildingR package version 0.1.0.9000-93. https://CRAN.R-project.org/package=RLumBuild

module_add_RLumTeam	*Module: add RLum-Team and update version timestamp*

Description

Module: add RLum-Team and update version timestamp

Usage

```
module_add_RLumTeam()
```

Function version

0.1.0

How to cite

module_build_documentation	
	Module: Build Documentation

Description

Module: Build Documentation

Usage

```
module_build_documentation()
```

---

module_check_ReverseDependencies
Check Reverse Dependencies

Description

Check the reverse dependencies of the package

Usage

```
module_check_ReverseDependencies()
```

Function version

0.1.0

module_compile_Attributes
Module: Compile attributes

Description

Module: Compile attributes

Usage

```
module_compile_Attributes()
```

---

module_create_DependencyGraph

Create Dependency Graph

Description

Create package dependency graph

Usage

```
module_create_DependencyGraph(Rversion = paste(R.version[c("major",
  "minor")], collapse = "."))
```

Arguments

Rversion   [character] (with default): R version for which the graph is created

module_register_EntryPoints
                    Module: set_VersionNumber

Description

Module: set_VersionNumber

Usage

```
module_register_EntryPoints(pkg_name)
```

Arguments

pkg_name   [character](#) the name of the package

---

module_set_VersionNumber
                    Module: set_VersionNumber

Description

Module: set_VersionNumber

Usage

```
module_set_VersionNumber()
```

```
module_write_FunctionList
```
Write Function Argument List

Description

Create a spread-sheet table with all function arguments

Create a HTML and markdown list of all major functions in the package

Usage

```
module_write_FunctionList()

module_write_FunctionList()
```

Details

Pevious versions were written by Michael Dietze and Sebastian Kreutzer. This version programmatically fetches all functions and arguments and does not rely on parsing the .Rd files with regular expressions.
